two stage single phase converters including two stage single phase dc ac inverters and two stage single phase pfc converters are interfacing power

converters between dc and ac voltage current sources which have been widely applied for dc ac and ac dc power conversion for the two stage single phase converter the ac side power pulsates at twice the ac voltage frequency resulting in second harmonic current shc which might flow into the dc dc converter the dc voltage source and dc load this book clarifies the generation propagation and side effects of this shc and proposes the shc reduction control schemes for the dc dc converter with different topologies and or different operating modes in the single phase converter on this basis the second harmonic current compensator shcc is proposed to compensate the shc significantly reducing the dc bus capacitance in doing so the electrolytic capacitors with short lifetimes are removed from the two stage single phase converter leading to extended system lifetime and enhanced system stability for having flawless shc compensation performance the port current control schemes are proposed for the shcc additionally the stability analysis is carried out for the two stage single phase converter with the addition of shcc this book is a monograph combining theoretical analysis and engineering design which could not only be a reference book for master students ph d students and teachers majoring in power electronics but also be a handbook for the electrical engineers working on the research and development of led drivers ev on board chargers railway auxiliary power supplies aviation power supplies renewable energy generation systems etc

research paper postgraduate from the year 2014 in the subject engineering power engineering grade 4 2 language english abstract in this paper a novel control method based on synchronous reference frame theory srft is proposed to compensate power quality problems through a three phase unified power quality conditioner upqc under unbalanced and distorted load conditions the performance of the proposed system has been verified using matlab simulink and are discussed in detail in this paper

rapid growth in the renewable energy sector and the upcoming growth of the electrical energy storage sector are resulting in an ever growing number of grid connected power converters these converters inject harmonic currents into the grid that can lead to unacceptable levels of harmonic pollution during both transients and steady state to study transient harmonics of power converters the concept of generalized averaging has recently attracted considerable interest two distinct approaches have been employed in the literature to obtain dynamic harmonics however embedded in these approaches are restricting assumptions that have been overlooked by some researchers this has resulted in several misconceptions and misapplications of models this thesis determines implicit underlying assumptions and identifies appropriate and inappropriate areas of applications for these two approaches a simple circuit is employed to clearly communicate ideas to study steady state harmonics of power converters few pragmatic tools presently exist for utilities to predict the impact of grid connecting a new power converter or to assess the potential grid impact of one converter versus another converter data sheets contain insufficient information to make such determinations it is generally known that the amount of harmonic injection depends not only on the background voltage harmonics but also on the interactions that occur between the grid harmonic impedance and the converter the thesis proposes new pragmatic techniques based on the frequency coupling matrix concept that permit accurate modeling and analysis of power converters without requiring detailed information about the internal parameters of the converters an online technique for identification of the frequency coupling matrix model of grid

connected converters is also proposed proposed techniques are verified through experimental measurements on a commercial three phase photovoltaic inverter
