designed for the undergraduate and postgraduate students of physics materials science and metallurgical engineering this text explains the theory of x ray diffraction starting from diffraction by an electron to that by an atom a crystal and finally ending with a diffraction by a conglomerate of atoms either in the single crystal or in the polycrystal stage this second edition of the book includes a new chapter on electron diffraction as electron diffraction along with x ray diffraction are complementary to each other and are also included in the curriculum the book amply blends the theory with major applications of x ray diffraction including those of direct analysis of lattice defects by x ray topography orientation texture analysis chemical analysis by diffraction as well as by fluorescence key features set of numerical problems along with solutions details of some different experimental techniques unsolved problems and review questions to grasp the concepts

over the past 50 years cereals such as maize rice wheat sorghum and barley have emerged as rapidly evolving crops because of new technologies and advances in agronomy breeding biotechnology genetics and so on population growth and climate

change have led to new challenges among which are feeding the growing global population and mitigating adverse effects on the environment one way to deal with these issues is through sustainable cereal production this book discusses ways to achieve sustainable production of cereals via agronomy breeding transcriptomics proteomics and metabolomics chapters review research examine challenges and present prospects in the field this volume is an excellent resource for students researchers and scientists interested and working in the area of sustainable crop production

the spirit of colin mccaahon provides a vivid historical contextualisation of new zealand s premier modern artist clearly explaining his esoteric religious themes and symbols via a framework of visual rhetoric this book explores the social factors that formed mccaahon s religious and environmental beliefs and justifications as to why his audience often missed the intended point of spiritual his discourse or chose to ignore it the spirit of colin mccaahon tracks the intricate process by which the artist s body of work turned from optimism to misery and explains the many communicative techniques he employed in order to arrest suspicion towards his christian prophecy more broadly the spirit of colin mccaahon outlines a model of analysis for the intersection of art and religion and the place of images as rhetorical devices within antipodean culture the emerging field of religion and visual culture is important not only to students of new zealand art history but also to a growing field of appreciation for the communicative power of images this book provides a helpful model for examining art and literature as social and religious tools and advances the importance of visual rhetoric within studies of art and social expression

due to efficacy and optimization potential of genetic and evolutionary algorithms they are used in learning and modeling especially with the advent of big data related problems this book presents the algorithms and strategies specifically associated with pertinent issues in materials science domain it discusses the procedures for evolutionary multi objective optimization of objective functions created through these procedures and introduces available codes recent applications ranging from primary metal production to materials design are covered it also describes hybrid modeling strategy and other common modeling and simulation strategies like molecular dynamics cellular automata etc features focuses on data driven evolutionary modeling and optimization including evolutionary deep learning include details on both algorithms and their applications in materials science and technology discusses hybrid data driven modeling that couples evolutionary algorithms with generic computing strategies thoroughly discusses applications of pertinent strategies in metallurgy and materials provides overview of the major single and multi objective evolutionary algorithms this book aims at researchers professionals and graduate students in materials science data driven engineering metallurgical engineering computational materials science structural materials and functional materials

presented at the 1st international conference on urban growth and the circular economy that was held in alicante spain the papers included in this book focus on the

continuing and rapid growth of cities and their regions of influence and how that has led to the need to find new solutions which allow for promoting their sustainable development the quest for the sustainable city has until recently focused on the efficient use of resources with the application of technical advances giving rise to the definition of smart cities the economic model emphasised however is still linear in the sense that the design and consumption follows the pattern of extraction of natural resources manufacturing product usage and waste disposal the continuous growth of urban population has recently given rise to the emergence of a new model which responds better to the challenges of natural resource depletion as well as waste management this model has been called the circular economy the circular economy is a recent concept based on the reuse of what up to now has been considered wastes reintroducing them into the productive cycle the objective of the circular economy is to reduce consumption and achieve savings in terms of raw materials water and energy thus contributing to the preservation of resources in order to reach sustainable development one of the most important of these resources is water which is becoming a scarce commodity in an ever expanding world whose population demands a better standard of living water is required for agricultural purposes as well as by industry in addition to its use by the general population the recycling of water is an essential component of the circular economy there is no possibility for the success of a long term economic policy without addressing the problems of natural resources and environmental pollution which will affect the reuse of materials and products the current market economy based on a linear model from resource extraction manufacturing consumption and waste disposal has not proved a long term suitable solution in spite of the substantial efforts made in reducing its environmental impacts this is largely due to the continuous population growth in a society that demands high standards of living thus requiring an ever increasing share of natural resources
